

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1-4, 7-9, 12, 14-15, 17-18, 20-22, 25, 40, and 45-46 CANCEL claims 13, 26-39, and 53 without prejudice to or disclaimer of the subject matter recited therein, and ADD claims 60 and 61, in accordance with the following:

1. (CURRENTLY AMENDED) An information storage medium, comprising:
~~a plurality of titles which are reproduced as motion pictures~~at least one title which is reproduced as a motion picture; and
~~a plurality of units~~at least one unit of attribute information, which correspond to the at least one title~~titles~~ and indicate whether a user is able to control one of the ~~titles~~at least one title to be reproduced.
2. (CURRENTLY AMENDED) The information storage medium of claim 1, further comprising title information which indicates entry points of the ~~plurality of titles~~at least one title corresponding to the attribute information.
3. (CURRENTLY AMENDED) The information storage medium of claim 1, wherein ~~the titles are~~each title is recorded with core mode data which includes audio/video data and navigation data reproducing the audio/video data.
4. (CURRENTLY AMENDED) The information storage medium of claim 1, wherein ~~each of the titles~~ includes at least one navigation object.
5. (ORIGINAL) The information storage medium of claim 4, wherein the at least one navigation object includes a navigation command which provides a command to reproduce a playlist corresponding to the title.
6. (ORIGINAL) The information storage medium of claim 5, wherein the playlist indicates at least a part of a clip.

7. (CURRENTLY AMENDED) The information storage medium of claim 6, wherein the playlist is a unit of reproduction, and corresponds to one clip, a part of one clip, ~~a plurality of clips~~ at least one clip, or parts of ~~a plurality of the at least one clip~~ clips.

8. (CURRENTLY AMENDED) The information storage medium of claim 1, wherein the at least one titles comprises:

core mode data which includes audio/video data and navigation data reproducing the audio/video data; and

full mode data which includes program data that enables interaction with a user and browsing data that enables Internet browsing.

9. (CURRENTLY AMENDED) The information storage medium of claim 1, wherein the at least one title includes a navigation object, and at least one of a browsing object that enables web browsing and a program object that enables interaction with a user.

10. (ORIGINAL) The information storage medium of claim 9, wherein the navigation object is implemented as a command program which provides a command to reproduce a predetermined playlist, the browsing object is implemented as a file which is recorded with a markup language and an executing script language, and the program object is implemented as a specific program file.

11. (ORIGINAL) The information storage medium of claim 9, wherein the playlist is reproducible using the browsing object and the program object.

12. (CURRENTLY AMENDED) The information storage medium of claim 1, wherein the attribute information includes access type information which represents each title as "normal title" ~~if the title is searchable by a user operation~~ to the title is permitted and represents each title as "hidden title" ~~if the title is not searchable by the user operation~~ to the title is not permitted.

13. (CANCELED).

14. (CURRENTLY AMENDED) A reproducing apparatus, comprising:

a reader which reads data comprising at least one title which is reproduced as a motion picture~~a plurality of titles to be reproduced as motion pictures~~ and ~~a plurality of units~~at least one unit of title information that correspond to the titles from an information storage medium;

a buffer which buffers the data read by the reader; and

a decoder which interprets the title information to indicate an entry point of the title and reproduces the title,

wherein the decoder interprets attribute information contained in the title information to indicate whether a user is able control the title to be reproduced.

15. (CURRENTLY AMENDED) The reproducing apparatus of claim 14, wherein the decoder reproduces ~~the title~~each title, which ~~are~~is recorded with core mode data including audio/video data and navigation data reproducing the audio/video data.

16. (ORIGINAL) The reproducing apparatus of claim 14, wherein the reader reads start up information, and the decoder searches the start up information for one title that is to be first reproduced.

17. (CURRENTLY AMENDED) The reproducing apparatus of claim 14, wherein the decoder executes at least one navigation object that is indicated by the entry point of ~~the~~each title.

18. (CURRENTLY AMENDED) The reproducing apparatus of claim 14, wherein the decoder executes a navigation object that includes a navigation command that provides a command to reproduce a playlist corresponding to the at least one title.

19. (ORIGINAL) The reproducing apparatus of claim 14, wherein the decoder reproduces a playlist that indicates at least a part of a clip.

20. (CURRENTLY AMENDED) The reproducing apparatus of claim 14, wherein the decoder reproduces a playlist that is a unit of reproduction which corresponds to one clip, a part of one clip, ~~a plurality of clips~~at least one clip, or parts of ~~a plurality of clips~~the at least one clip.

21. (CURRENTLY AMENDED) The reproducing apparatus of claim 14, wherein the decoder reproduces the at least one title which comprises:

core mode data, which includes audio/video data and navigation data reproducing the audio/video data; and

full mode data, which includes program data that enables interaction with a user and browsing data that enables Internet browsing.

22. (CURRENTLY AMENDED) The reproducing apparatus of claim 21, wherein the decoder executes at least one of a navigation object corresponding to ~~the~~each title, a browsing object that enables web browsing, and a program object that enables interaction with a user.

23. (ORIGINAL) The reproducing apparatus of claim 22, wherein the decoder executes the navigation object implemented as a command program which provides a command to reproduce a playlist, the browsing object implemented as a file, which is recorded with a markup language and an executing script language, and the program object implemented as a specific program file.

24. (ORIGINAL) The reproducing apparatus of claim 22, wherein the decoder reproduces a predetermined playlist by executing the browsing object and the program object.

25. (CURRENTLY AMENDED) The reproducing apparatus of claim 21~~14~~, wherein the decoder determines that ~~the title is searchable by a user operation~~a user operation to the title is permitted if access type information which acts as the attribute information represents the title as "normal title", and ~~the title is not searchable by the user operation~~the user operation to the title is not permitted if the access type information represents the title as "hidden title".

26. (CANCELED).

27. (CANCELED).

28. (CANCELED).

29. (CANCELED).

30. (CANCELED).

31. (CANCELED).

32. (CANCELED).

33. (CANCELED).

34. (CANCELED).

35. (CANCELED).

36. (CANCELED).

37. (CANCELED).

38. (CANCELED).

39. (CANCELED).

40. (CURRENTLY AMENDED) An information storage medium, comprising:
~~a plurality of at least one title which is reproduced as a motion picture titles which are reproduced as motion pictures; and~~
title access type information, which corresponds to the at least one title and indicates whether ~~the corresponding titles is able to be searched for by a user operation to the~~ corresponding title is permitted.

41. (ORIGINAL) The information storage medium of claim 40, wherein the title access type information further comprises title number display type information which indicates whether a title number of the corresponding title is displayed.

42. (ORIGINAL) An information storage medium, comprising:
core mode data which comprises audio and/or video (AV) data; and
index information designating reproduction paths of the AV data recorded in the core mode data, wherein the core mode data is searchable by a user communicating with the index information.

43. (ORIGINAL) The information storage medium of claim 42, wherein the index information comprises:
start up information designating an entry point of the AV data of an initial title to be reproduced upon initiating a reproduction of the information storage medium; and
title information designating the AV data corresponding to respective titles to be reproduced and attribute information designating whether each title is controllable by a user.

44. (ORIGINAL) The information storage medium of claim 43, wherein the attribute information comprises title number display type information to reproduce a title number when a corresponding one of the titles is not controllable by the user.

45. (CURRENTLY AMENDED) The information storage medium of claim 44, wherein the index information further comprises:

menu information displaying a list of ~~the titles~~each title that ~~are~~is selectable and reproducible by the user from among the at least one title~~titles~~ based on the attribute information.

46. (CURRENTLY AMENDED) The information storage medium of claim 45, further comprising:

full mode data comprising at least one of program data enabling interaction with the user and browsing data enabling Internet browsing, and

wherein the index information designates reproduction paths of the ~~titles~~at least one title comprising core mode data and full mode data.

47. (ORIGINAL) The information storage medium of claim 46, wherein the program data comprises Java applications.

48. (ORIGINAL) The information storage medium of claim 46, wherein the browsing data comprises a markup document.

49. (ORIGINAL) The information storage medium of claim 46, wherein the core mode data and the full mode data communicate by an application program interface (API).

50. (ORIGINAL) The information storage medium of claim 46, wherein the titles comprise a part of the AV data in the core mode data, and at least one of the program data and browsing data in the full mode data.

51. (ORIGINAL) The information storage medium of claim 50, wherein the startup information comprises both core mode data startup information and full mode data startup information, wherein the information storage medium is compatible with a reproducing apparatus which only reproduces core mode data.

52. (ORIGINAL) A reproducing apparatus using an information storage medium, comprising:

a reader which reads titles and title information corresponding to the respective titles from the information storage medium;
a buffer which buffers the titles and title information; and
a decoder which selectively decodes the titles based on the title information and attribute information in the title information designating user control of the selected decoded titles.

53. (CANCELED).

54. (ORIGINAL) The apparatus of claim 52, wherein the decoder interprets startup information from the title information and decodes one of the titles corresponding to the startup information first.

55. (ORIGINAL) The apparatus of claim 54, wherein each title comprises at least one of,
core mode data which comprises audio and/or video (AV) data and navigation commands corresponding to the AV data; and
full mode data which comprises at least one of program data enabling interaction with the user and browsing data enabling Internet browsing.

56. (ORIGINAL) The apparatus of claim 55, wherein the decoder comprises:
a browsing engine decoding the browsing data and executing browsing commands from the decoded browsing data;
a program engine decoding the program data and executing program commands from the decoded program data;
a navigation engine decoding navigation commands in the titles and the title information;
a presentation engine decoding the AV data; and
an application manager controlling reproduction of the titles based on whether a portion of each title is startup information, core mode data, or full mode data and user input when the attribute information designates that the respective title is controllable by the user.

57. (ORIGINAL) The apparatus of claim 56, wherein the application manager controls a mode conversion corresponding to a core mode reproducing the core mode data and a full mode reproducing the full mode data when each title is decoded.

58. (ORIGINAL) The apparatus of claim 57, wherein the mode conversion is executed by hidden title information in the title information which the user is unable to control.

59. (ORIGINAL) The apparatus of claim 58, wherein the hidden title information is decoded in a predetermined order set by a manufacturer of the information storage medium.

60. (NEW) The information storage medium of claim 12, wherein the user operation to the title is permitted when a value of the access type information is 0, and the user operation to the title is prohibited when the value of the access type information is 1.

61. (NEW) The reproducing apparatus of claim 25, wherein the user operation to the title is permitted when a value of the access type information is 0, and the user operation to the title is prohibited when the value of the access type information is 1.
